DESCRIPTORS: \*Blast furnaces, \*Gas flow, Pressure.

Pressure drop in a blast furnace is inversely proportional to the gas pressure, assuming a constant distribution and composition of the charge column. An increased top pressure decreased in a blast furnace the angles of repose in a coke charge, the size of the burden at the periphery, and chimney formation, while it increases the amount of fine fractions remaining in the furnace and particularly at the periphery. Theoretically, an increased top pressure is more effective when the regional pressure is lower and when the de-

<p>For the determination of the amide-nitrogen of amino-acids, peptides and proteins, alkaline hydrolysis at about 20° is combined with diffusion of the ammonia formed into sulfuric acid. Hydrolysis and NH<sub>3</sub>-determination are carried out in one flask. The reaction is complete within 24 hours.
